                                                                                                                                                                                                                                                                                                                                          The invention relates to isolated Acinetobacter baumannii nucleic acids. The A. baumannii nucleic acids and polypeptides are useful as reagents for diagnosing a bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, to detect the presence of A. baumannii and other Acinetobacter species in a sample, in screening compounds for the ability to interfere with the A. baumannii life cycle or to inhibit A. baumannii infection, and as biocontrol agents for presents equence represents DNA encoding an A. baumannii

                                                                                                                                                                                                                        The invention relates to antisense inhibitors of genes essential to CC prokaryotic cellular proliferation, their use in identifying the genes, CC their use in the discovery of novel antibiotics, the essential genes, CC coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also cu useful for the identification of potential new targets for antibiotic CC development. The antisense nucleic acide can also be used to identify CC proteins used in proliferation, to express these proteins, and to obtain CC antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The cc antisense nucleic acid sequence is also useful to screen for homologous cucleic acids which are required for cell proliferation in a wide variety CC of organisms. The present sequence encodes an essential prokaryotic cellular proliferation protein. Note: The sequence data for this pattent CC did not form part of the printed specification, but was obtained in CC electronic format directly from MIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      경 유
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibite proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation, (8) identifying a gene required for cellular proliferation or the biological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      21-MAR-2001; 2001US-00815242

pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an conganism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antiense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in effective in the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

The invention relates to isolated, recombinant polypeptides (I) that have CC at least one activity of specified bacterial enzymes involved in cell CC membrane biogenesis. (I) are: UDP-N-acetylglucosamine 1-carboxyvinyl CC transferase-1 of Streptococcus pneumoniae (S.p.), Pseudomonas aeruginosa (C (P.a.) or Staphylococcus aureus (S.a.); CTP:CMP-3-deoxy-D-manno-CC octulosonate transferase of Escherichia coli (E.c.) or Haemophilus CC influenzae (H.i.); UDP-N-acetylmuramylalanyl-D-glutamate- 2,6-CC or P.a.; D-alanine-D-alanine-D-alanine-D-alanine-D-alanine-D-alanine-D-alanine-D-alanine-D-alanine-D-alanine-D-alanine-D-alanine-D-alanine-D-alanine-D-alanine-D-alanine-D-A-CC ox P.a.; D-N-N-CC acetylpuyruvoylglucosamine reductase of E.f., H.i. or S.a.; UDP-N-CC acetylpuyruvoylglucosamine pyrophosphorylase of E.f., H.i. or S.a.; UDP-N-CC acetylmuramate-alanine-D-glutamate-ligase of E.g.; and aspartate semialdehyde CC dehydrogenase of H.i and UDP-N-acetylmuramoylalanyl-D-glutamate (sic) of CC in the structural coordinates of (I), and these than used to design modulators of (I), potential therapeutic agents for treating CC diseases caused by the specified bacteria. This sequence represents a DNA

                                                                                                                                                                                                                                                                                                  The invention relates to a composition (I) comprising purified polypeptides from bacteria. Also described: (1) a crystallized, recombinant polypeptide comprising an amino acid sequence of (I), where the polypeptide is in crystal form; (2) a crystallized complex comprising the crystallized, recombinant polypeptide and a co-factor or a small organic molecule, where the complex is in crystal form; and (3) a host cell comprising a nucleic acid encoding a polypeptide of (I), where a culture of the host cell produces at least about 1 mg of the polypeptide per liter of culture and the polypeptide is at least about one-third soluble as measured by gel electrophoresis. The composition and methods are useful for diagnosing, preventing or treating diseases, such as microbial infections. These may also be used in pharmacogenomic or drug screening procedures. The present sequence represents a Haemophilus influenzae UDP-N-acetylmuramoylalanine-D-glutamate ligase gene sequence, which is a composition of the polypeptide of the polypeptide of the polypeptide of the polypeptide is at least about one-third soluble as measured by gel electrophoresis. The composition and methods are useful for diagnosing, preventing or treating diseases, such as microbial infections. These may also be used in pharmacogenomic or drug screening procedures. The present sequence represents a Haemophilus which is a composition and methods and methods are useful for diagnosing procedures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Edwards

(1) is useful for reducing the virulence of H. influenzae to be used a vaccine composition, and for decreasing the growth rate of a microorganism. The present sequence represents a H. influenzae murb coding sequence, which is used in the
exemplification of the present invention.

North Pacific Subtropical Gyre (Hawaii) picoplankton genomic fo
DNA library prepared from marine picoplankton in the less than
um, greater than 0.22 um fraction. Sample Date: 12/21/2003
Coordinates: 22.45 N, 158 W Depth 4000 m Temperature: 1.46 C
Salinity: 34.69 Oxygen: 147.8 umol/kg
Class: fosmid ends
                                                                                                                                                                                                                                                                                                                                                                                                                           1 (Dases 1 to 1025)

North Pacific Subtropical Gyre (Hawaii) picoplankton genomic fosmid
DNA library prepared from marine picoplankton in the less than 1.6
UM, greater than 0.22 um fraction. Sample Date: 12/21/2003
Coordinates: 22.45 N, 158 W Depth 4000 m Temperature: 1.46 C
Salinity: 34.69 Oxygen: 147.8 umol/kg
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 US DOE Joint Genome Institute
